Q.70 Assume a living cell with 0.9%(w/w) of glucose solution (aqueous). This cell is immersed in another solution having equal mole fraction of glucose and water.

(Consider the data upto first decimal place only)

The cell will :

Options 1.

shrink since solution is 0.45%(w/w) as a result of association of glucose molecules (due to hydrogen bonding)

2. swell up since solution is 1%(w/w)

3. shrink since solution is 0.5%(w/w)

4. show no change in volume since solution is 0.9%(w/w)
